(54) Title: CONTAINER

(57) **Abstract:** A container for food which is closed by a peelable membrane (2) at one end and a sanitary end (4) at the opposite end. The container has a ring (1) to which the membrane is fixed, the ring and sanitary end being formed from the same sheet metal. In order to make this possible, the container body (3) flares outwardly at the end to which the ring is fixed and is necked at the opposite end. Dimensions are selected so that the resultant container is not only stable but also readily handled during manufacture, filling and on supermarket shelves.
